

MediTalk Enterprise

MediTalk is an unparalleled physician's user interface for medical dictation, which can be implemented in over 30 specialties. The newest product **MediTalk Enterprise** has quickly become the flagship of dictation systems for the medical industry, second to none.

With thousands of satisfied users nationwide **MediTalk** has exploded onto the market in the last 2 years.

Voice recognition software must do more than just allow speaking into a microphone and having the text appear in a document; a state of the art database and document processing capability is required to build a complete system.

MediTalk Software is a complete system that contains all necessary components required for your total solution.

Whether utilizing a professional speech mic or a headset, dictation goes directly into the **MediTalk** software and is accurately stored on your system for immediate access. Medical Practices are now able to manage their own data, this means keeping confidential patient records in-house, thereby eliminating information potentially being lost, or even shared unknowingly. Medical Transcription can be costly, especially with service fees continually rising. These reoccurring fees can become permanently eliminated when utilizing the **MediTalk** software system.

Our professional staff stands ready to assist you in your quest for a more cost effective and secure method of transcription, EMR, equipment procurement or even networking your system. The [Q&A page](#) should address most of the issues associated with voice recognition. By completing our [questionnaire](#) you will be providing us with the information necessary for one of our representatives to better assist you on the first contact. At that time, we will be prepared to discuss in greater detail the benefits and related costs of the **MediTalk** system.
